容积式润滑系统装配图

Installation Diagram of Volumetric Lubrication System

容积式集中稀油润滑系统概述

Description of the volumetric centralized thin oil lubricating system

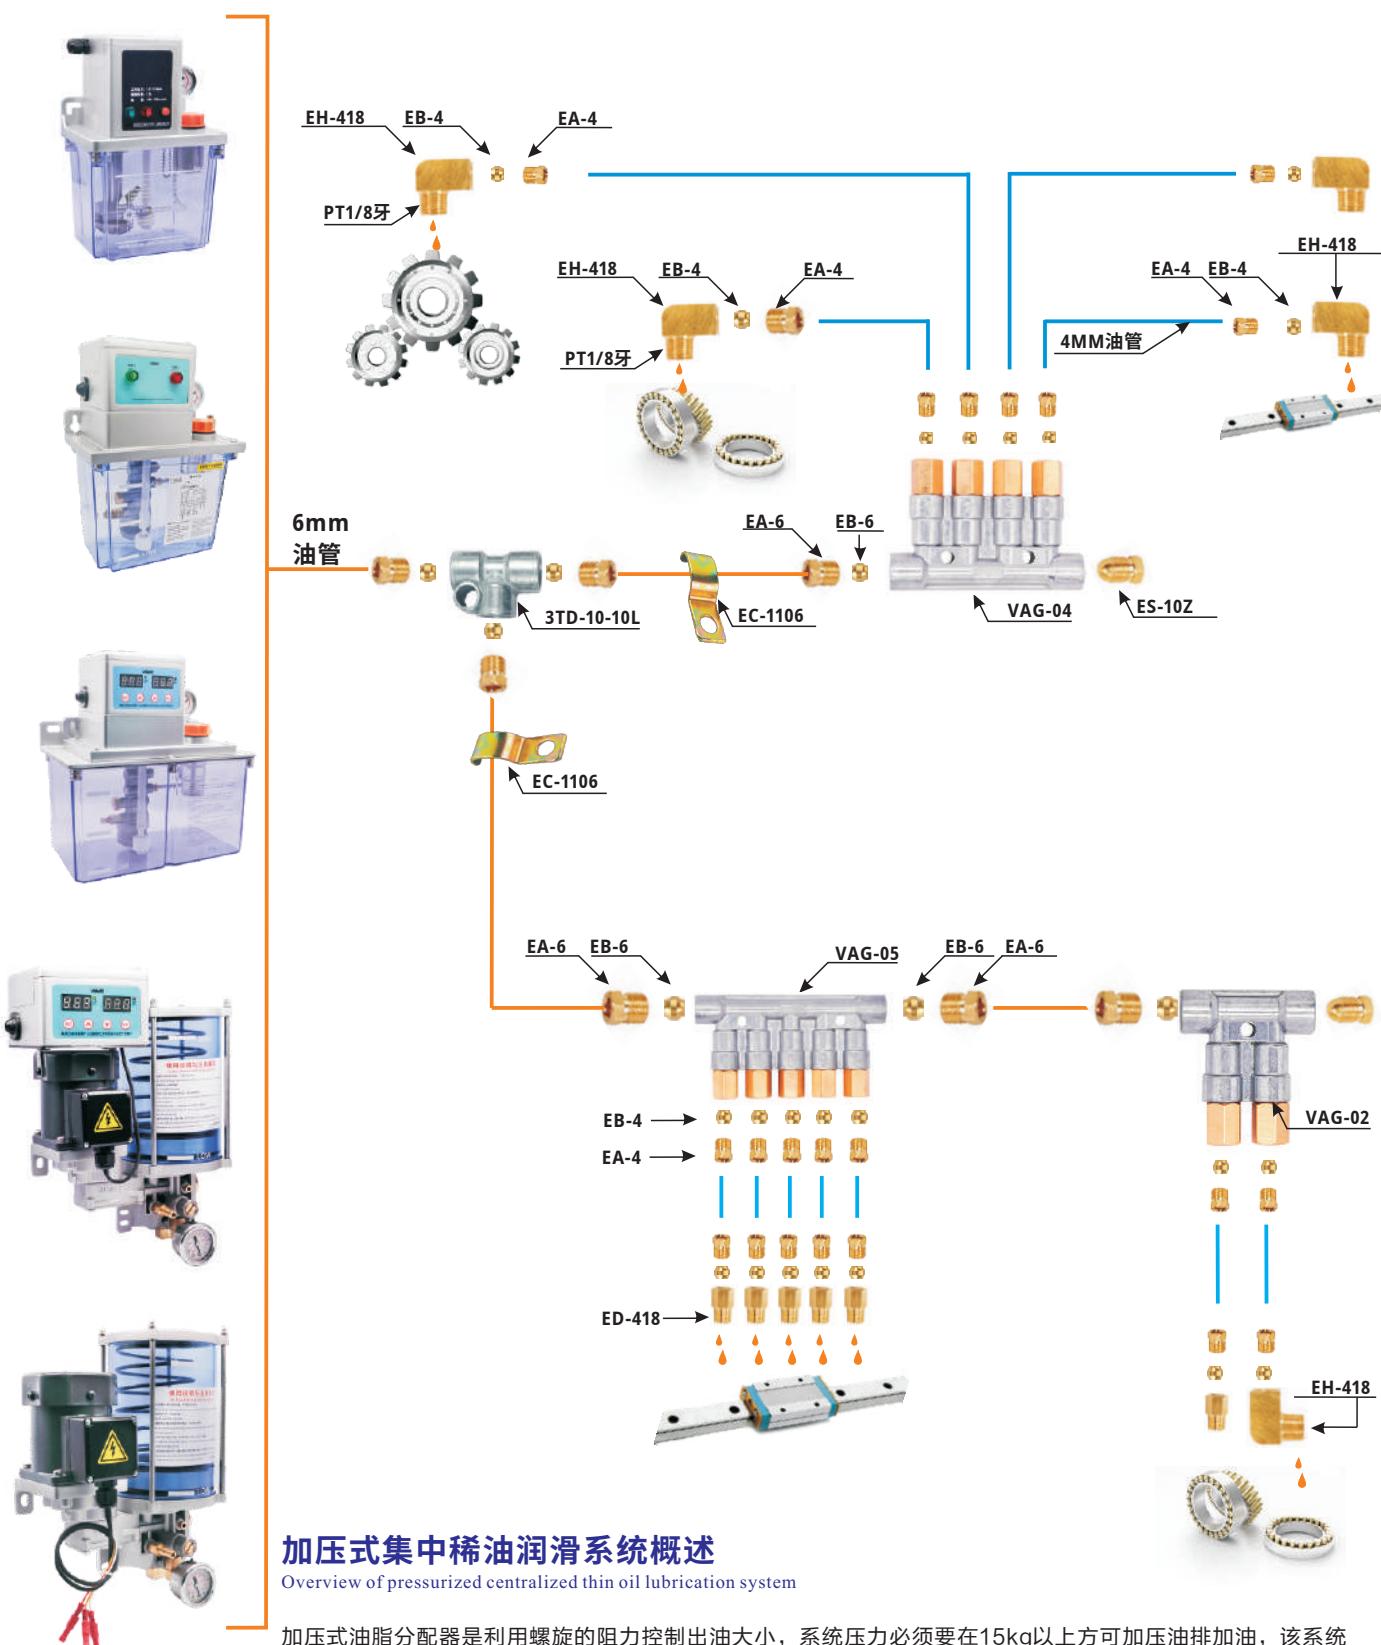

容积式润滑系统由容积式润滑泵与滤油器、直通式分油块、容积式分配器、铜接头油管等配件组成，

此润滑系统包括（脱压式定量出油）和（加压式定量出油）两种形式。

The volumetric lubricating system is composed of volumetric lubricating pump and oil filter, through oil distribution block, volumetric distributor, copper joint and oil pipe etc..The lubricating system is composed of two types of oil delivery.namely, the decompression quantified oil delivery and the pressurized quantificed oil delivery.

加压式润滑系统装配图

Installation Diagram of Volumetric Lubrication System

加压式集中稀油润滑系统概述

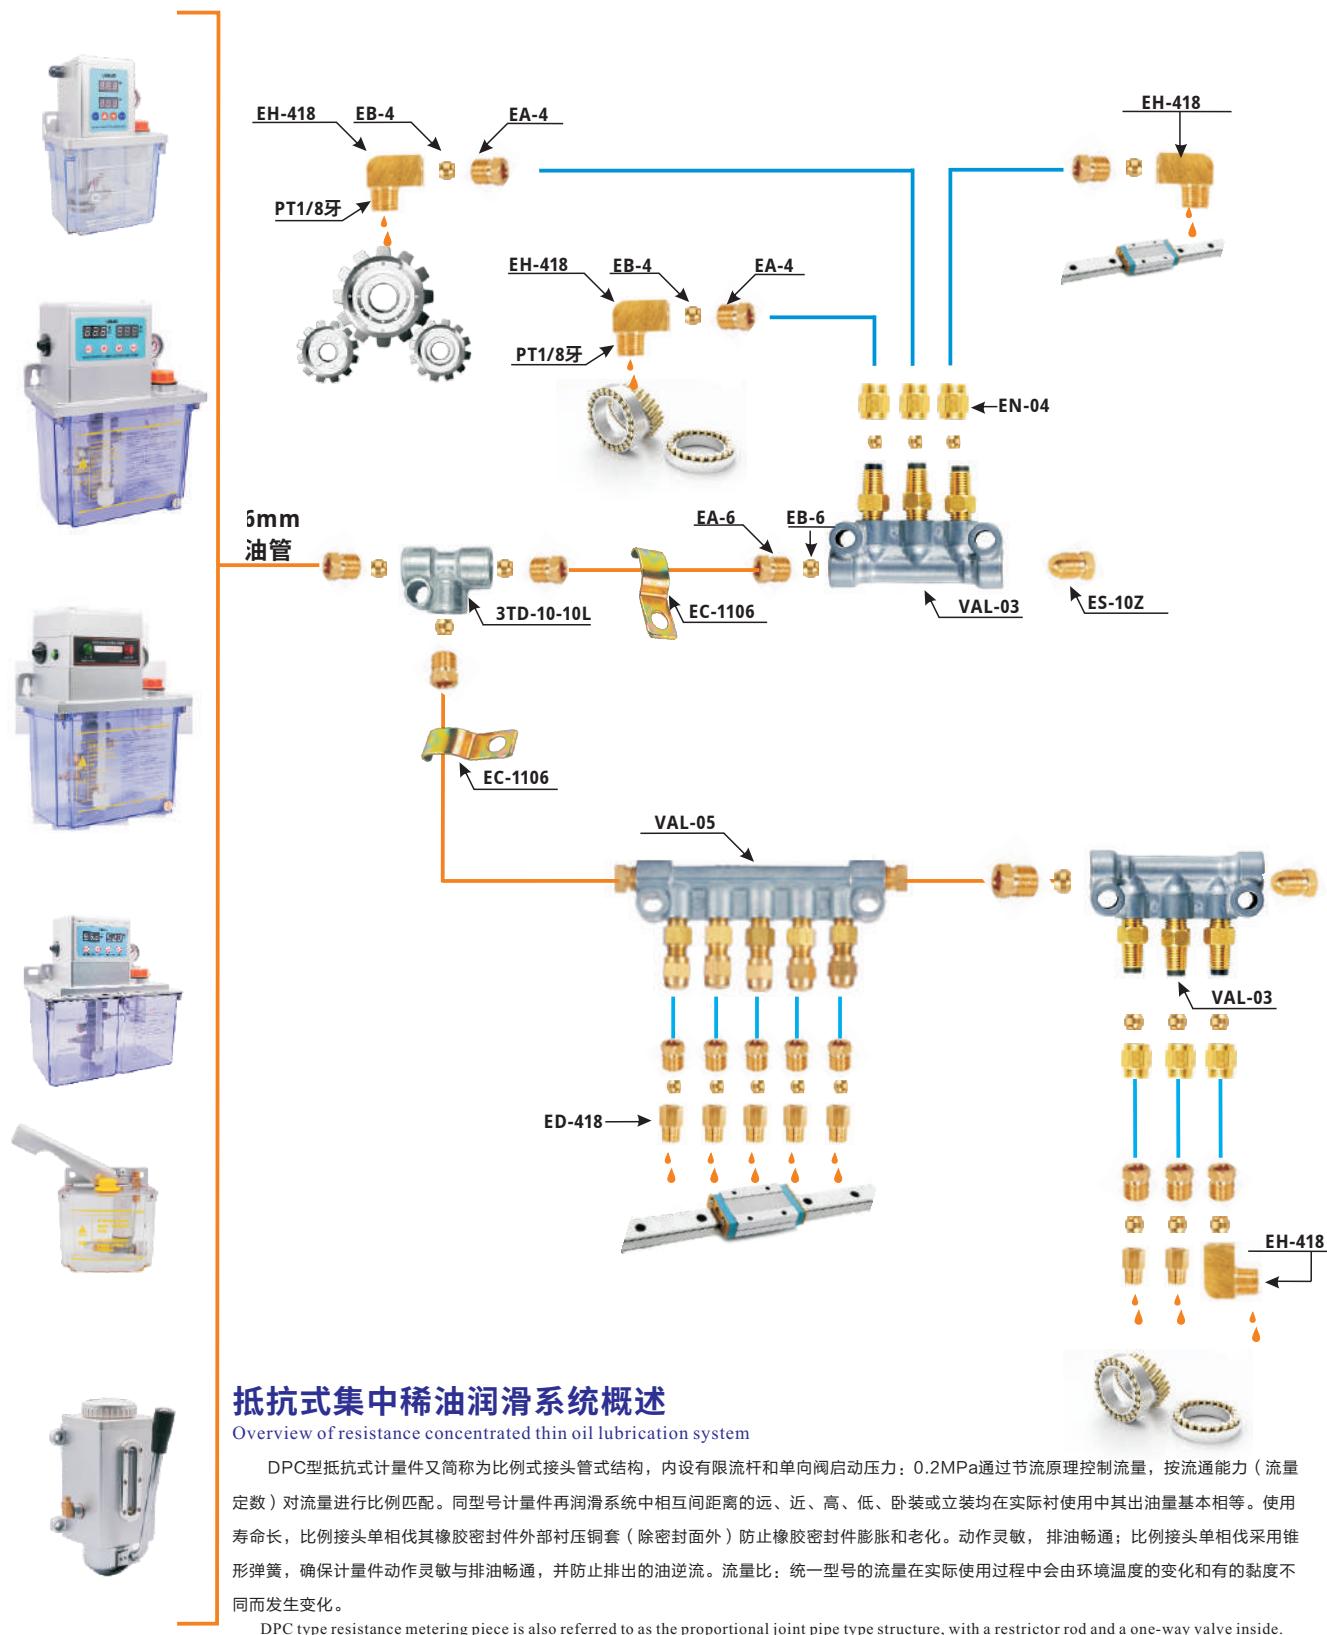

Overview of pressurized centralized thin oil lubrication system

加压式油脂分配器是利用螺旋的阻力控制出油大小，系统压力必须要在15kg以上方可加压油排加油，该系统适用于000#至1#润滑油的机械；

Pressurized grease distributor is used to control the size of oil output by the resistance of the screw, and the pressure of the system must be more than 15kg Can be pressurized oil drainage and refueling, the system is suitable for 000# to 1# lubricating oil machinery;

抵抗式润滑系统装配图

Installation Diagram of Volumetric Lubrication System

抵抗式集中稀油润滑系统概述

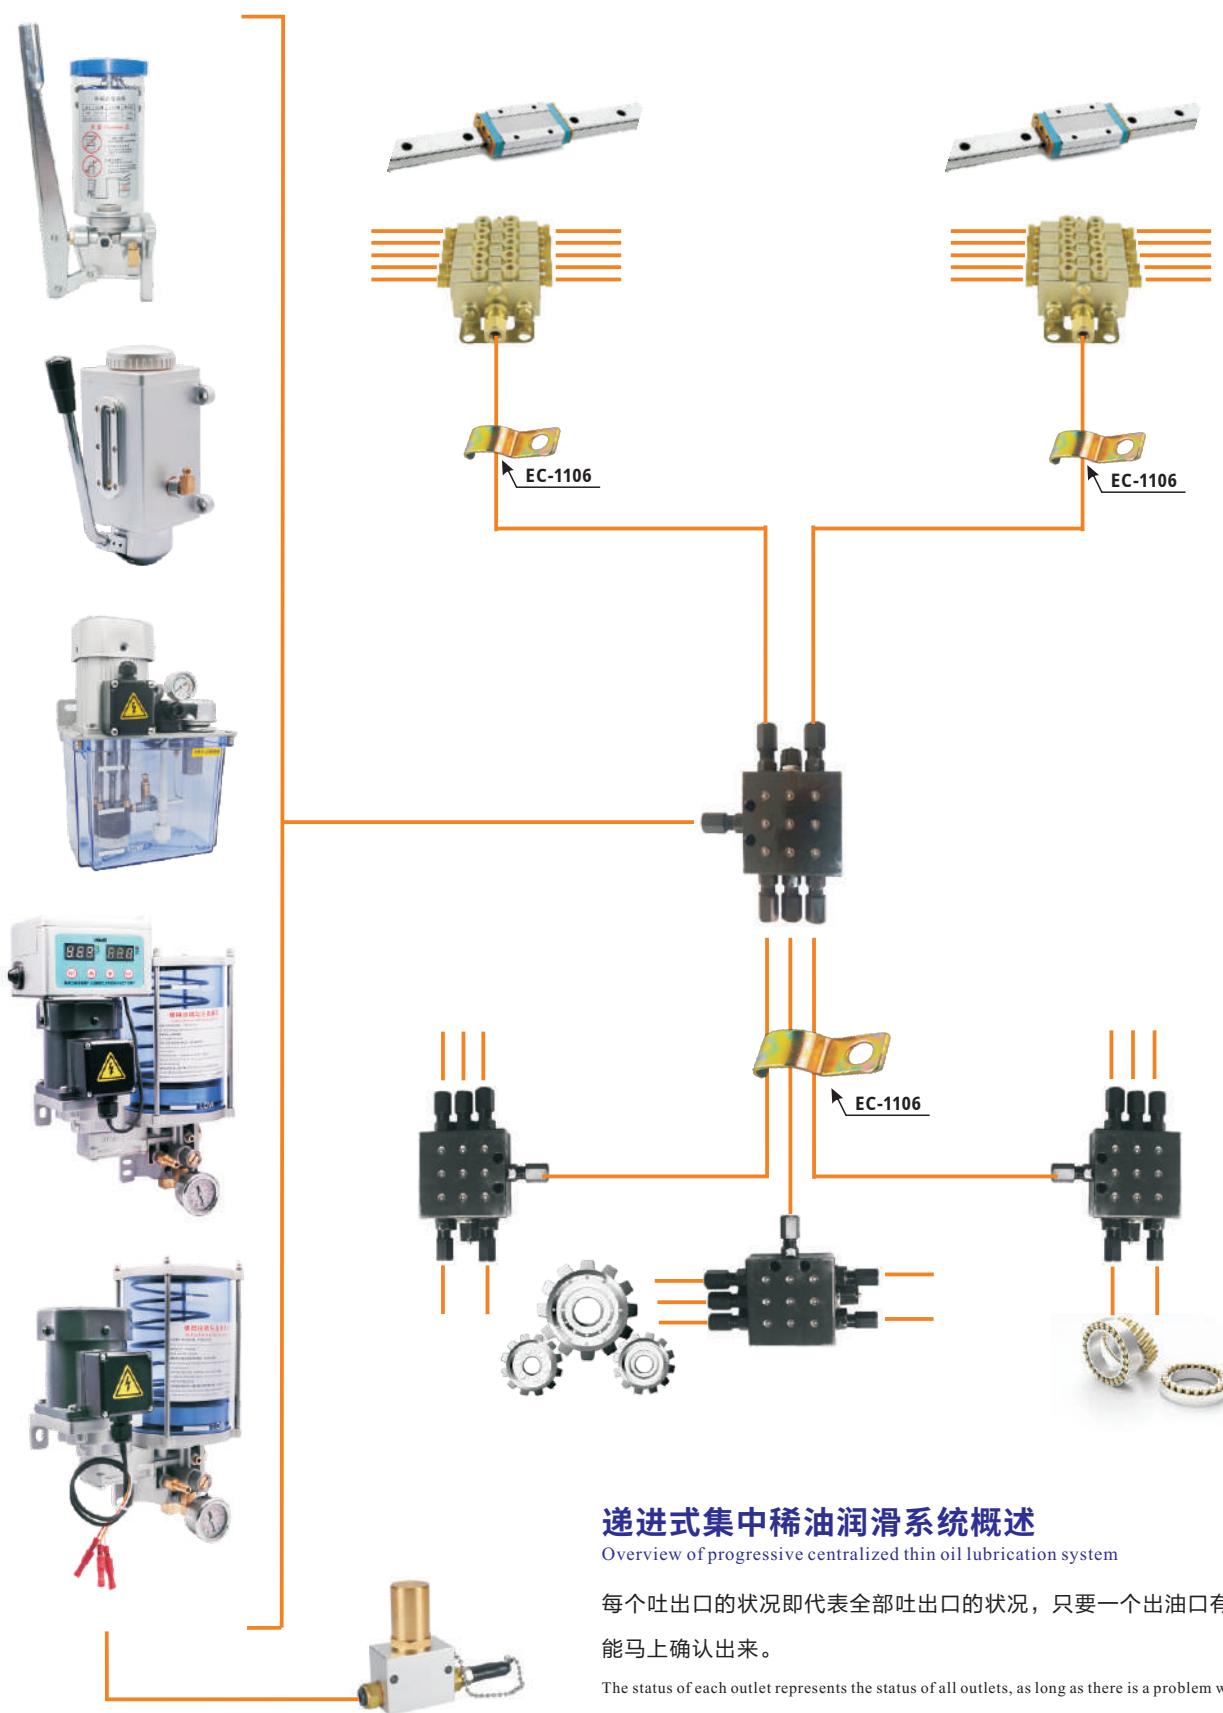

Overview of resistance concentrated thin oil lubrication system

DPC型抵抗式计量件又简称为比例式接头管式结构，内设有限流杆和单向阀启动压力：0.2MPa通过节流原理控制流量，按流通能力（流量定数）对流量进行比例匹配。同型号计量件再润滑系统中相互间距离的远、近、高、低、卧装或立装均在实际衬使用中其出油量基本相等。使用寿命长，比例接头单相伐其橡胶密封件外部衬压铜套（除密封面外）防止橡胶密封件膨胀和老化。动作灵敏，排油畅通；比例接头单相伐采用锥形弹簧，确保计量件动作灵敏与排油畅通，并防止排出的油逆流。流量比：统一型号的流量在实际使用过程中会由环境温度的变化和有的黏度不同而发生变化。

DPC type resistance metering piece is also referred to as the proportional joint pipe type structure, with a restrictor rod and a one-way valve inside. Start-up pressure: 0.2MPa controls the flow rate through the throttling principle, and proportionally matches the flow rate according to the flow capacity (flow rate). In the relubrication system of the same type of metering parts, the distance between the far, near, high, low, horizontal or vertical installation is basically the same in actual lining use. Long service life, the proportional joint single-phase rubber seal is lined with a copper sleeve (except the sealing surface) to prevent expansion and aging of the rubber seal.

The action is sensitive and the oil drain is smooth; the proportional joint single-phase valve adopts a conical spring to ensure the sensitive action of the metering piece and the smooth oil drain, and prevent the drained oil from flowing back. Flow rate ratio: The flow rate of the unified model will change due to the change of ambient temperature and the difference of some viscosity during actual use.

递进式润滑系统装配图

Progressive lubrication system
assembly drawing

递进式集中稀油润滑系统概述

Overview of progressive centralized thin oil lubrication system

每个吐出口的状况即代表全部吐出口的状况，只要一个出油口有问题并能马上确认出来。

The status of each outlet represents the status of all outlets, as long as there is a problem with one outlet, it can be confirmed immediately.

输入电压
The input voltage

1	单相 Single phase 110V
2	单相Single phase 220V
3	DC12V
4	DC24V

性能和特点 Performance & Characteristics

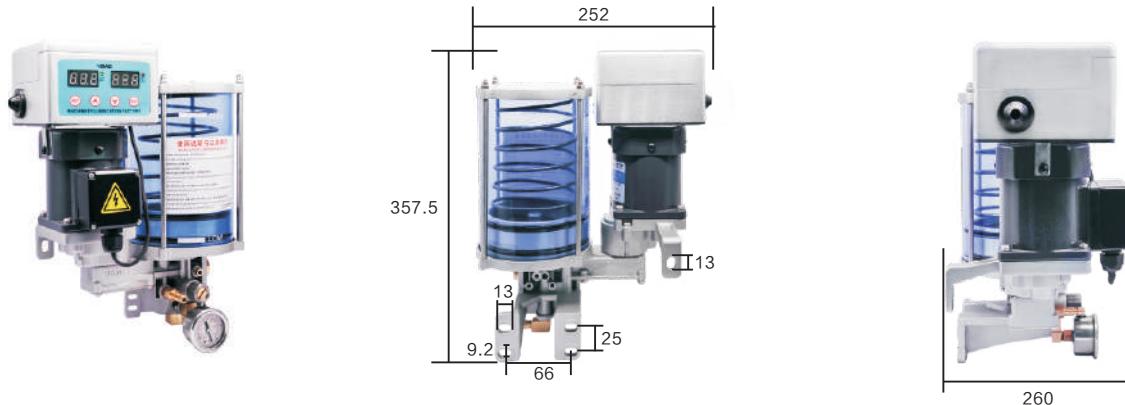

- 可通过主机PLC或独立控制器控制润滑油泵工作周期;
- 设电磁阀卸压装置，当润滑油泵停止运行确保系统自动快速卸压;
- 设有调压阀装置，可自主设定润滑油泵的工作压力保障其工作安全;
- 设有排气阀，可排除润滑油泵腔内空气确保润滑油泵排油通畅;
- 设有低油位报警装置，当油量不足时，会发出报警信号;
- 请使用加油枪通过油脂过滤器向润滑油泵储油箱内添加油脂，可避免杂质，空气混入润滑系统内从而提高润滑系统;
- 润滑油泵可安装压力开关有效的检测润滑油泵主管油路是否中断渗漏等压力不足现象;
- 采用弹簧式压油盘真空吸油;

- The working cycle of the lubricating oil pump can be controlled by the host PLC or an independent controller.
- Equipped with a solenoid valve pressure relief device, when the lubricating oil pump stops running to ensure that the system automatically and quickly relieve pressure.
- Equipped with a pressure regulating valve device, which can independently set the working pressure of the lubricating oil pump to ensure its safety.
- Equipped with exhaust valve, it can eliminate the air in the lubricating oil pump cavity to ensure the smooth discharge of the lubricating oil pump.
- With low oil level alarm device, when the oil is insufficient, an alarm signal will be issued.
- Please use a grease gun to add grease to the oil pump storage tank through the grease filter to avoid.
- No impurities, air is mixed into the lubrication system to improve the lubrication system.
- Lubricating oil pump can be installed with a pressure switch to effectively detect whether the main pipeline of the lubricating oil pump is interrupted or leaking.
- Wait for insufficient pressure.
- Vacuum oil absorption by spring type oil pressure plate.

自带显示器柱塞式黄油泵

Piston type grease pump with display

分离显示器柱塞式油脂泵

Separate display plunger grease pump

操作说明：

1. 工作时间设定：

请长按SET键见数字跳动时松开按钮，按▲▼键设定个位数时间，再按SET跳动到十位数按▲▼键设定十位数时间，再按下SET键跳动百位数，按▲▼键设定百位数时间(1~999秒)；

2. 间歇时间设定：

工作时间设定完毕后按住SET键约2秒跳动到间歇时间的个位数，按▲▼键设定时间，按下SET键进入到十位数，按▲▼键设定时间，再按下SET键进入百位数，按▲▼键设定时间，(1~999分钟/小时)设定完毕后，长按SET键进入正常工作状态；

3. RST键为暂停键或启动键，也可消除压力异常报警；

4. 油泵设定好时间后，进入LUB(工作)与INT(间歇)循环转换状态；

5. ERO闪烁时，表示油量不足需重新注入新油自动消除报警；

6. ERP闪烁时，表示压力异常，需检查油泵是否工作正常或油管主路是否有破裂或者漏油现象导致压力不足；

7. 电脑板内设有按键锁，打开小开关■可锁住SET键按钮，不能进入时间设定，RST可正常使用；

8. 电脑板内设有间歇时间断电记忆功能，打开小开关■进入断电记忆状态；

Instructions:

1. Working Time Setting:

Please long press SET button, and release the SET button when the number jumps. Press ▲▼ button to set single digit time, then press SET to jump to ten digits. Press ▲▼ button to set ten digit time. Press SET again to jump through the hundreds digit, then press ▲▼ button to set the hundreds digit time. (1~999 seconds);

2. Intermittent Time Setting:

After setting the working time, hold down the SET button for about 2 seconds to jump to the single digit of the intermittent time, press the ▲▼ button to set the time. Press the SET button to enter the ten digits, then press the ▲▼ button to set time. Press the SET button to enter the hundreds digit, press the ▲▼ button to set the time. (1~999 minutes / hour) After setting, long press the SET button to enter the normal working state;

3. The RST button is a pause button or a restart button, which can also eliminate;

4. After the time of oil pump has been set, it will enter the LUB and INT cycle conversion state;

5. When ERO flashes, it means that the amount of oil is insufficient and new oil needs to be refilled to automatically eliminate the alarm;

6. When the ERP flashes, it indicates that the pressure is abnormal. It is necessary to check whether the oil pump is working properly or whether the main pipe of the oil pipe is cracked or oil leakage causes insufficient pressure;

7. There is a lock button in the computer board. Open the small switch ■, you can lock the SET button. Then you can't enter the time setting but RST can be used normally;

8. There is intermittent power-off memory function in the computer board. When open the small switch ■, it will enter the power-off memory state;

VC220 □ -015X 电动润滑泵 (罩极电机)

性能和特点 Performance & Characteristics

- 安装方便，接线简单；
- 供油时间由主机电脑PLC控制与设定；
- 采用特殊合金钢齿轮泵，具有输出压力稳定，噪音小，寿命长；
- 具有液位不足侦测功能；
- 具有自动脱压功能，与检知容积式分配器使用可充分发挥润滑效果。

Easy to install and easy to connect;

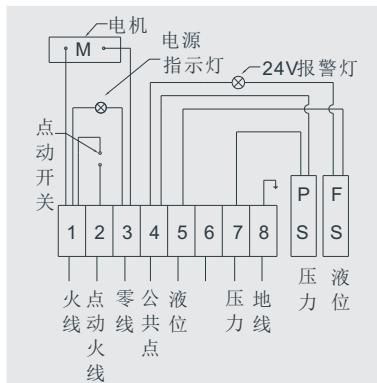

- Oil supply time is controlled and set by the host computer PLC；
- Special alloy steel gear pump with stable output pressure, low noise and long life；
- Low level detection；
- It has automatic decompression function, and the use of the detection volume distributor can give full play to the lubrication effect.

VL220 □ -400X 电动润滑泵 (异步电机)

性能和特点 Performance & Characteristics

- 安装方便，接线简单；
- 供油时间由主机电脑PLC控制与设定；
- 采用特殊合金钢齿轮泵，具有输出压力稳定，噪音小，寿命长；
- 具有液位不足侦测功能；
- 具有自动脱压功能，与检知容积式分配器使用可充分发挥润滑效果；
- 异步电机可连续工作适用于工作时间较长的设备；

- Easy to install and easy to connect;
- Oil supply time is controlled and set by the host computer PLC;
- Special alloy steel gear pump with stable output pressure, low noise and long life;
- Low level detection;
- It has automatic decompression function, and the use of the detection volume distributor can give full play to the lubrication effect.
- Asynchronous motor can work continuously and is suitable for equipment with long working time.

Instructions For

VC2232-015XB :不带压力开关

操作说明

1. 工作时间设定:

请长按SET键见数字跳动时松开按钮，按▲▼键设定个位数时间，再按SET跳动到十位数按▲▼键设定十位数时间，再按SET键跳动百位数，按▲▼键设定百位数时间(1-999秒)；

2. 间歇时间设定:

工作时间设定完毕后按住SET键约2秒跳动到间歇时间的个位数，按▲▼键设定时间，按下SET键进入到十位数，按▲▼键设定时间，再按下SET键进入百位数，按▲▼键设定时间，(1-999分钟/小时)设定完毕后，长按SET键进入正常工作状态；

3. RST键为暂停键或启动键，也可消除压力异常报警；

4. 油泵设定好时间后，进入LUB(工作)与INT(间歇)循环转换状态；

5. ERO闪烁时，表示油量不足需重新注入新油自动消除报警；

6. ERP闪烁时，表示压力异常，需检查油泵是否工作正常或油管主路是否有破裂或者漏油现象导致压力不足；

7. 电脑板内设有按键锁，打开小开关■可锁住SET键按钮，不能进入时间设定，RST可正常使用；

8. 电脑板内设有间歇时间断电记忆功能，打开小开关■进入断电记忆状态；

1. Working Time Setting:

Please long press SET button, and release the SET button when the number jumps. Press ▲▼ button to set single digit time, then press SET to jump to ten digits. Press ▲▼ button to set ten digit time. Press SET again to jump through the hundreds digit, then press ▲▼ button to set the hundreds digit time. (1-999 seconds);

2. Intermittent Time Setting:

After setting the working time, hold down the SET button for about 2 seconds to jump to the single digit of the intermittent time, press the ▲▼ button to set the time. Press the SET button to enter the ten digits, then press the ▲▼ button to set time. Press the SET button to enter the hundreds digit, press the ▲▼ button to set the time. (1-999 minutes / hour) After setting, long press the SET button to enter the normal working state;

3. The RST button is a pause button or a restart button, which can also eliminate;

4. After the time of oil pump has been set, it will enter the LUB and INT cycle conversion state;

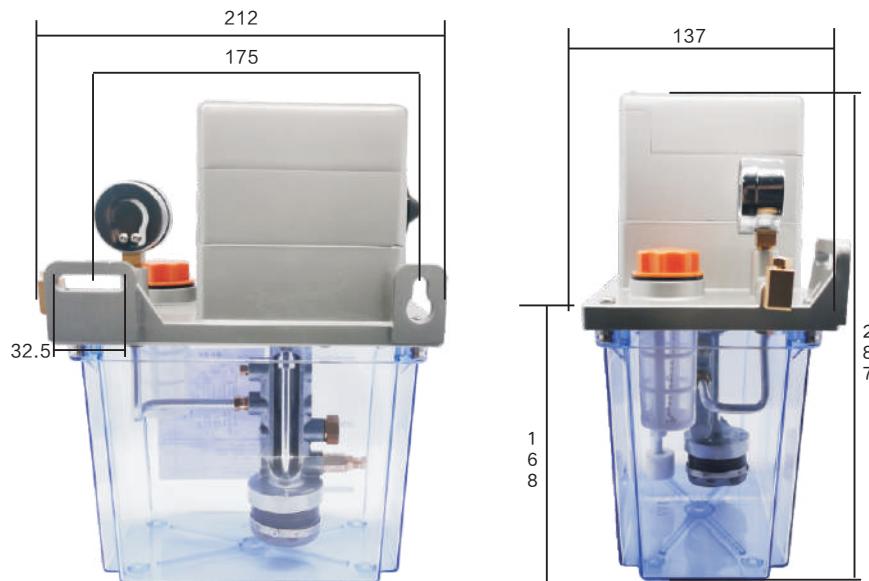

5. When ERO flashes, it means that the amount of oil is insufficient and new oil needs to be refilled to automatically eliminate the alarm;

6. When the ERP flashes, it indicates that the pressure is abnormal. It is necessary to check whether the oil pump is working properly or whether the main pipe of the oil pipe is cracked or oil leakage causes insufficient pressure;

7. There is a lock button in the computer board. Open the small switch ■, you can lock the SET button. Then you can't enter the time setting but RST can be used normally;

8. There is intermittent power-off memory function in the computer board. When open the small switch ■, it will enter the power-off memory state;

请长按SET键见数字跳动时松开按钮，按▲▼键设定个位数时间，再按SET跳动到十位数按▲▼键设定十位数时间，再按SET键跳动百位数，按▲▼键设定百位数时间(1~999秒)；

2. 间歇时间设定:

工作时间设定完毕后按住SET键约2秒跳动到间歇时间的个位数，按▲▼键设定时间，按下SET键进入到十位数，按▲▼键设定时间，再按下SET键进入百位数，按▲▼键设定时间，(1~999分钟/小时)设定完毕后，长按SET键进入正常工作状态；

3. RST键为暂停键或启动键，也可消除压力异常报警；

4. 油泵设定好时间后，进入LUB(工作)与INT(间歇)循环转换状态；

5. ERO闪烁时，表示油量不足需重新注入新油自动消除报警；

6. ERP闪烁时，表示压力异常，需检查油泵是否工作正常或油管主路是否有破裂或者漏油现象导致压力不足；

7. 电脑板内设有按键锁，打开小开关■可锁住SET键按钮，不能进入时间设定，RST可正常使用；

8. 电脑板内设有间歇时间断电记忆功能，打开小开关■进入断电记忆状态；

Instructions For

1. Working Time Setting:

Please long press SET button, and release the SET button when the number jumps. Press ▲▼ button to set single digit time, then press SET to jump to ten digits. Press ▲▼ button to set ten digit time. Press SET again to jump through the hundreds digit, then press ▲▼ button to set the hundreds digit time. (1~999 seconds);

2. Intermittent Time Setting:

After setting the working time, hold down the SET button for about 2 seconds to jump to the single digit of the intermittent time, press the ▲▼ button to set the time. Press the SET button to enter the ten digits, then press the ▲▼ button to set time. Press the SET button to enter the hundreds digit, press the ▲▼ button to set the time. (1~999 minutes / hour) After setting, long press the SET button to enter the normal working state;

3. The RST button is a pause button or a restart button, which can also eliminate;

4. After the time of oil pump has been set, it will enter the LUB and INT cycle conversion state;

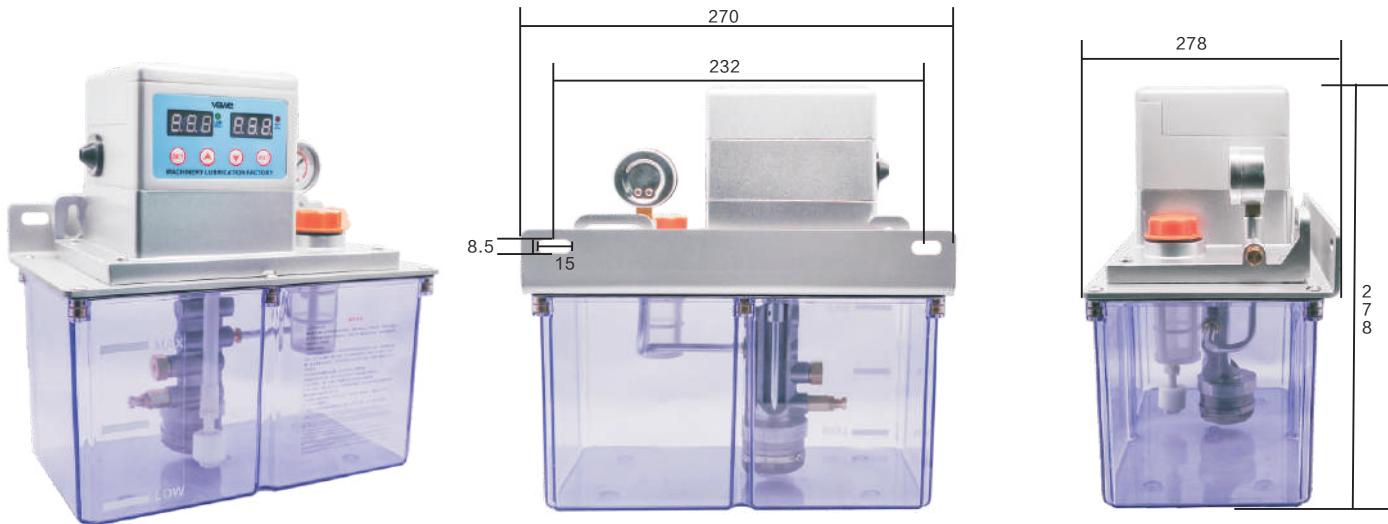

5. When ERO flashes, it means that the amount of oil is insufficient and new oil needs to be refilled to automatically eliminate the alarm;

6. When the ERP flashes, it indicates that the pressure is abnormal. It is necessary to check whether the oil pump is working properly or whether the main pipe of the oil pipe is cracked or oil leakage causes insufficient pressure;

7. There is a lock button in the computer board. Open the small switch ■, you can lock the SET button. Then you can't enter the time setting but RST can be used normally;

8. There is intermittent power-off memory function in the computer board. When open the small switch ■, it will enter the power-off memory state;

VG520 □ -400X 电动润滑泵(异步电机)

性能和特点 Performance & Characteristics

- 安装方便，接线简单；
- 供油时间由主机电脑PLC控制与设定；
- 采用特殊合金钢齿轮泵，具有输出压力稳定，噪音小，寿命长；
- 具有液位不足侦测功能；
- 具有自动脱压功能，与检知容积式分配器使用可充分发挥润滑效果；
- 异步电机可连续工作适用于工作时间较长的设备；

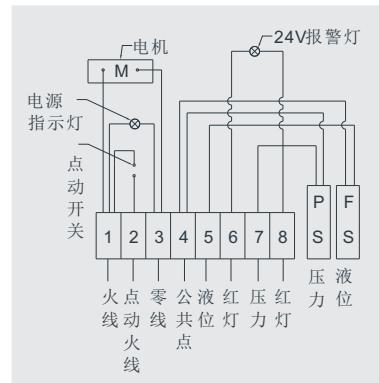

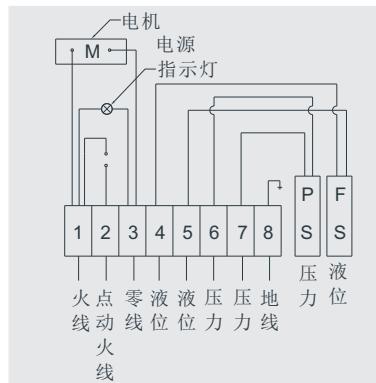

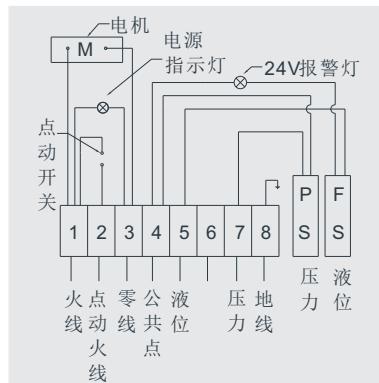

- Easy to install and easy to connect;
- Oil supply time is controlled and set by the host computer PLC;
- Special alloy steel gear pump with stable output pressure, low noise and long life;
- Low level detection;
- It has automatic decompression function, and the use of the detection volume distributor can give full play to the lubrication effect.
- Asynchronous motor can work continuously and is suitable for equipment with long working time.

性能和特点 Performance & Characteristics

EYW- 经济款喷雾器 Economical sprayer

此产品应用真空自呼吸之原理, 使液体经由喷嘴和空气混合雾化, 喷射至加工件, 刀具或轴承等润滑点。冷却效果佳, 并提供润滑, 除屑; 清洁等功能, 以提升生产效率及加工品质, 减少机械刀具之损耗。

This product applies the principle of vacuum self-respiration to atomize the liquid through the nozzle and air and spray it to the lubrication point such as workpiece, tool or bearing. Good cooling effect, and provide lubrication, chip removal, cleaning and other functions to improve production efficiency and machining quality, reduce the loss of mechanical tools.

使用场合 Precautions

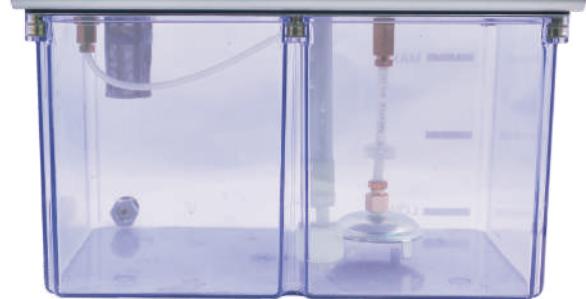

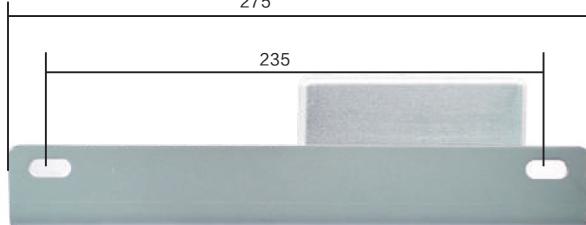

车床, 钻床, 铣床, 磨床, 攻牙机, 刀具研磨机, CNC机床, 冲床, 锯床, 木工机械, 送料机等。

Lathes, drilling machines, milling machines, grinders machines, tapping machines, tool grinders machines, CNC machine tools, punch, saw, woodworking machinery,feeder, etc.

性能和特点 Performance & Characteristics

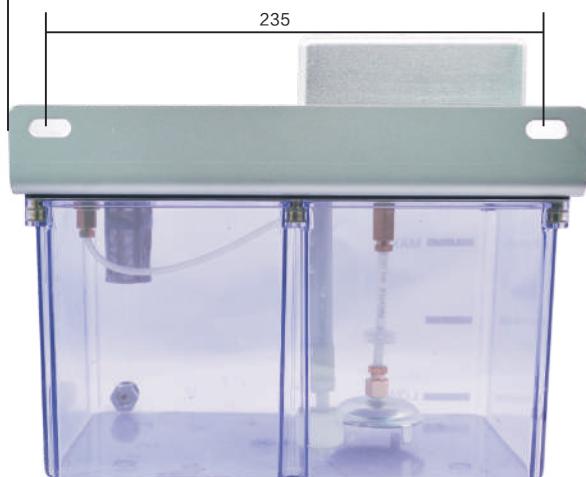

- 系统设有调压阀和电磁阀，对气源进行精确控制，与润滑液充分混合雾化，减小机械刀具之损耗，冷却润滑效果更佳。
 - A.数显控制：冷却润滑时间和间歇均可调整。
(内设有锁键功能，可锁定设定后的润滑和间歇时间) 系统时间可设定，“LUB”润滑时间：1~999(秒), “INT”间歇时间：1~999(分钟/小时)
 - B.PLC控制：冷却润滑时间和间歇时间由外部PLC控制。
 - C.冷却润滑时间和间歇时间无需设定
 - 设有液压开关、当冷却润滑液不足时蜂鸣器发出报警信号并将异常信号输出（数显液位不足时显示ERO）
 - 面板指示灯可显示出润滑和间歇状态
 - 系统建议使用气源压力0.4~0.6Mpa
 - 默认气体和液体管直径为6mm
 - 配合EYW自吸式冷却润滑喷雾器使用
- Performance and characteristics:
- The system is equipped with pressure regulating valve and solenoid valve, which can precisely control the air source and atomize with the lubricating fluid to reduce the loss of the mechanical cutting tools and achieve better cooling and lubrication effect.
 - A. Digital display control: both cooling and lubrication time and intermittent can be adjusted. System time can be set, "LUB" lubrication time: 1~999(seconds), "INT" interval time: 1~999(min/h)
 - B. PLC control: cooling and lubrication time and interval time are controlled by external PLC.
 - C. No setting is required for cooling and lubrication time and interval time
 - Equipped with hydraulic switch, when the cooling lubricant is insufficient, the buzzer will send an alarm signal and output the abnormal signal (ERO will be displayed when the liquid level is insufficient for digital display).
 - Panel indicator lights indicate lubrication and intermittent conditions
 - The system is recommended to use an air source pressure of 0.4~0.6mpa
 - The default gas and liquid tube diameter is 6mm Use with EYW self – priming cooling lubrication atomizer

容积式定量分配器 Volumetric quantitative distributor

型号规格 specifications	出口数 Outlet quantity	A	B	吐出量 Throughput
VAE-02	2	69	39	0.1/0.2/ 0.3/0.4/ 0.5
VAE-03	3	86	54	
VAE-04	4	102	69	
VAE-05	5	116.5	84	

油量表示方式：（注当所有出油口油量值一样时，只用一个油量值表示）

例1：VAE-05-2表示VAE型五位第1、2、3、4、5出油口油量全部为0.2mL每次

例2：VAE-05-53235表示VAE型五位第1、2、3、4、5出油口油量分别为0.5、0.3、0.2、0.3、0.5mL每次

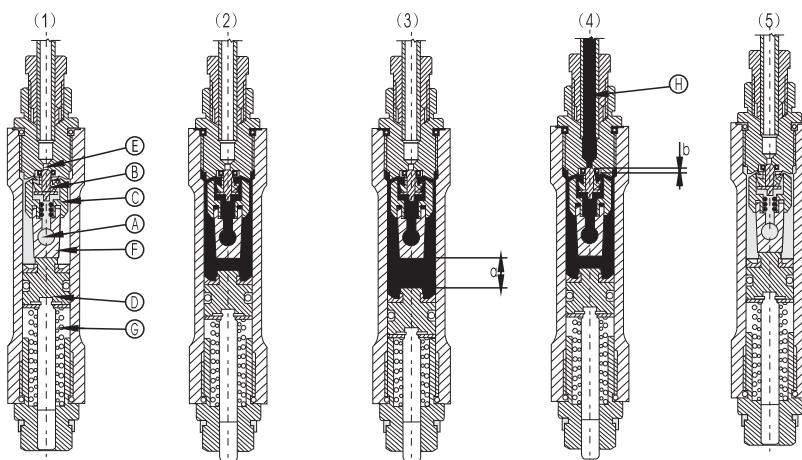

The amount of oil:

(When all outlets have the same oil quantity, only one oil quantity is used)

Example 1: VAE-05-2 indicated that the quantity of oil at the first, second, third, fourth and fifth positions was all 0.2mL each time

Example 2: VAE-05-53235 indicated that the output of the first, second, third, fourth and fifth viva was 0.5, 0.3, 0.2, 0.3 and 0.5mL each time, respectively

VAE型分配器工作原理 Working principle of VAE type distributor

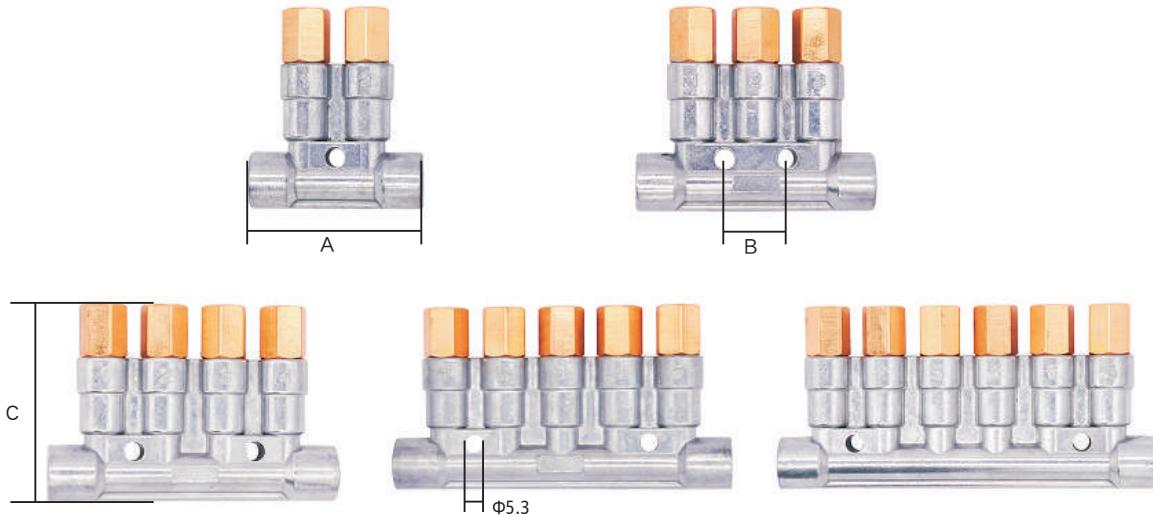

- ◎ (1) 休止中
- ◎ (2) 主管加压计量中
- ◎ (3) 计量完毕
- ◎ (4) 油吐出中
- ◎ (5) 油吐出完毕
- ◎ A、计量活塞动作行程
- ◎ B、伞形双向阀动作行程

分配器工作原理图

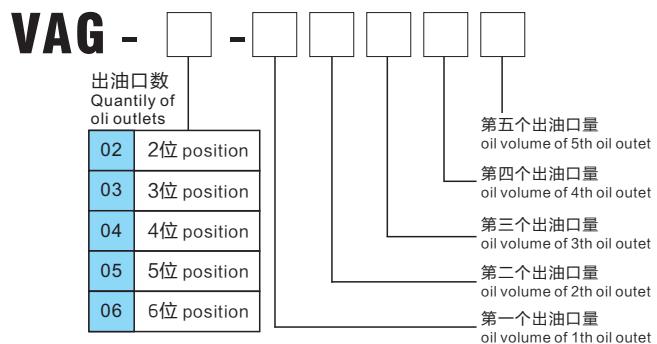

见上图，从润滑泵压送来的油，由主管A注入，并将伞型双向阀B向上推开流入，通过通路C压送至活塞室F内。受压力油作用下计量活塞向下动作，弹簧G被压缩蓄压，从而进行计量蓄油。

当主管A内油压被释放（即卸压），伞型阀B因压力差而向下动作，同时开启吐出口E，于是活塞室内计量蓄油通过吐出口E进入油管H而将油输送到润滑点，信号销I当计量蓄油时突出，而供油给润滑点时缩回，从而可确认分配器动作完成情况。

性能和特点 Performance & Characteristics

VEG整体式递进式分配器是一种广泛使用于油脂润滑系统中的计量分配部件，其设计先进、结构合理，由于内外部所有的元器件全部由金属组合而成，故可以适用于高压、宽温度变化的工况场合，同时也可应用在中低压的油脂润滑系统。

VEG整体递进式分配器由于具有递进式、无需卸压的结构特点，可以与任意类型的包括电动、气动、液动等类型油脂泵组合配套为油脂集中润滑系统，为各种大中小型机床设备、工程机械、风力发电、钢厂、港口、起塔及其它各种设备提供润滑工作。

VEG整体递进式分配器性能特点：

- 采用整体式的设计，密封性能更加优越；②采用最新颖的出油口封面设计，可以使用油塞和特殊出油接头随意组合出油口数量；③设计结构更加紧凑、合理；油量输出精确；

VEG monolithic progressive distributor is a kind of widely used in measuring distribution of grease lubrication system components, its advanced design, reasonable structure, due to the internal and external all components are all made by metal, so it can be applied to occasions, working conditions of high pressure and wide temperature change at the same time can also be used in low pressure grease lubrication system."

VEG whole progressive distributor with progressive type, without pressure relief structure characteristic, can with any type of types including electric, pneumatic, hydraulic oil pump sets for grease lubrication system, for all kinds of big small and medium-sized machine tool equipment, engineering machinery, wind power, steel, ports, towers and other all sorts of equipment to provide lubrication.

Performance characteristics of VEG integral progressive distributor :

1. Adopting integral design, the sealing performance is better;
2. The most innovative taper design for oil outlets was adopted. The number of outlets could be randomly combined with oil plugs and a special oil outlet connector. More compact and reasonable designs; Accuracy of the fluid output;

型号规格specifications	VEG06	VEG08	VEG10	VEG12	VEG14	VEG16	VEG18	VEG20
最多出油口数	6	8	10	12	14	16	18	20
A(mm)	60	75	90	105	120	135	150	165
出油量 (mL/cyc)	0.2							
使用润滑剂	润滑油≥60cst;润滑脂000#00#,0#,1#,2#							
推动油压	≥1.5MPa							
最大输出压力	35MPa							

注:分配器的同侧的出油口数量，可通过油塞取代出油接头将相邻的一些出油口堵住，实现出油口数量合并如:二合一、三合一、四合一等，但01和02出油口不能堵住。合并后每一侧的出油口数至少保留一个，因此VEG整体式分配器出油口合并后最少为2口。另外若有需要可以将01和02出油口贯通，此时经合并后分配器出油口可为1个。

性能和特点 Performance & Characteristics

DPC型抵抗式计量件又简称为比例式接头管式结构，内设有限流杆和单向阀
启动压力：0.2MPa通过节流原理控制流量，按流通能力（流量定数）对流量进行比例匹配。同型号计量件再润滑系统中相互间距离的远、近、高、低、卧装或立装均在实际使用中其出油量基本相等。使用寿命长，比例接头单相伐其橡胶密封件外部衬压铜套（除密封面外）防止橡胶密封件膨胀和老化。
动作灵敏，排油畅通；比例接头单相伐采用锥形弹簧，确保计量件动作灵敏与排油畅通，并防止排出的油逆流。流量比：统一型号的流量在实际使用过程中会由环境温度的变化和有的黏度不同而发生变化。

DPC type resistance metering piece is also referred to as the proportional joint pipe type structure, with a restrictor rod and a one-way valve inside.
Start-up pressure: 0.2MPa controls the flow rate through the throttling principle, and proportionally matches the flow rate according to the flow capacity (flow rate). In the relubrication system of the same type of metering parts, the distance between the far, near, high, low, horizontal or vertical installation is basically the same in actual lining use. Long service life, the proportional joint single-phase rubber seal is lined with a copper sleeve (except the sealing surface) to prevent expansion and aging of the rubber seal.
The action is sensitive and the oil drain is smooth; the proportional joint single-phase valve adopts a conical spring to ensure the sensitive action of the metering piece and the smooth oil drain, and prevent the drained oil from flowing back. Flow rate ratio: The flow rate of the unified model will change due to the change of ambient temperature and the difference of some viscosity during actual use.

VAC/F单支加压式稀油分配器工作原理图

Schematic diagram of the VAC/F distributor

1 排油前（加压开始）

2 排油中（加压中）

3 排油完毕（加压完毕）

4 计量中（活塞回复中）

- 从油泵中压送出来的润滑剂，使分配器内的伞形阀开始往上推支。
- 当伞形阀把蕊杆中心孔封闭后，迫使活塞克服弹簧力开始上升，将上腔原先储存的油剂往外排出。
- 当活塞移至上腔顶点时，排油也同量完毕。
- 油泵停止供油量，其卸压阀自行开启，使主油管内压力油通过卸压阀回油，此时系统压力下降，分配器中的活塞在弹簧作用下开始回复，当伞形阀回复封闭分配器进油口，则活塞把储存在下腔的油剂通过蕊杆小孔压送到上腔，同时下次的供油也准备完毕。

1.The lubricant sent from the medium pressure of the oil pump causes the umbrella valve in the distributor to start pushing up the branch.

2.When the umbrella valve closes the core hole of the rod, the piston is forced to overcome the spring force and start to rise, expelling the oil previously stored in the upper cavity.

When the piston moves to the top of the upper cavity, the oil discharge is also completed.

3.The oil pump stops supplying oil, and its pressure relief valve opens itself, so that the pressure oil in the main oil pipe returns through the pressure relief valve. At this time, the pressure of the system decreases, and the piston in the distributor is under the action of spring.

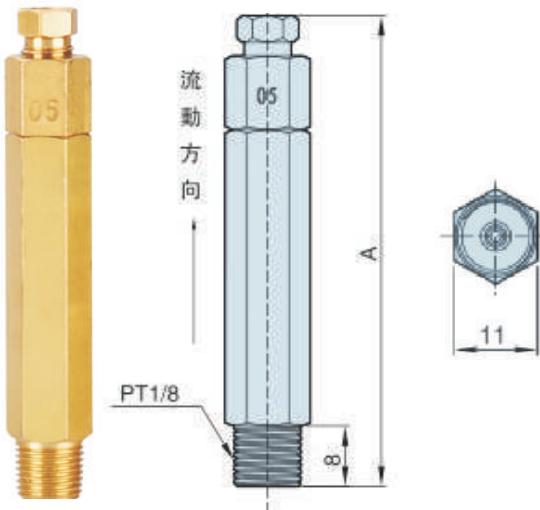

4.Start to reply, when the umbrella valve returns to the closed distributor inlet, the piston sends the oil stored in the lower cavity to the upper cavity through the rod hole, and the next supply is ready.

性能和特点 Performance & Characteristics

滤油器适用于油脂润滑系统;

 滤油器用于清除或者减少杂质混入润滑系统; 滤油器安装方法:

- 1、安装在润滑泵加油口前端，通过油枪，经滤油器，向润滑泵注入油剂；
- 2、安装在润滑系统油泵出油口与分配器进油口之间(滤油器去除注油口快插接头)，安装在润滑泵加油口前端，通过油枪，经滤油器，向润滑泵注入油剂；

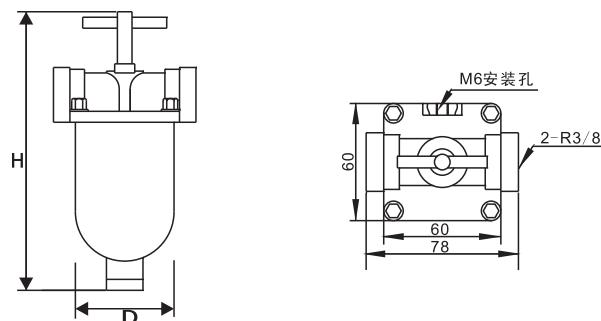

Oil filter is suitable for grease lubrication system;

The oil filter is used to remove or reduce impurities from the lubrication system.

Detectable with oil Filters:

1. Install at the front end of the refueling port of the lubricating pump and inject oil agent into the lubricating pump through the oil gun and filter;
2. It shall be installed between the oil outlet of the oil pump of the lubrication system and the oil inlet of the distributor (the quick insert joint of the oil filter to remove the oil injection nozzle). It is installed at the front end of the refueling port of the lubricating pump. Through the oil gun and through the oil filter, oil agent is injected into the lubricating pump.

D调整型滤油器 Adjustable Oil Filter

性能和特点 Performance & Characteristics

1. 压力损失小，结构紧凑，安装方便；

2. 可随时旋转把手进行清洁；

3. 适用于周期或连续润滑系统中；

1. Small pressure loss, compact structure, easy installation.

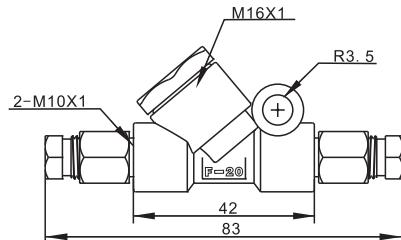

2. The handle can be rotated for cleaning at any time.

3. Suitable for periodic or continuous lubrication system.

2. 过滤精度有 10μ 、 25μ 、 125μ 三种可选。

2. Filtration accuracy is 10μ , 25μ and 125μ .

3. 适用于周期或连续润滑系统中。

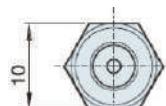

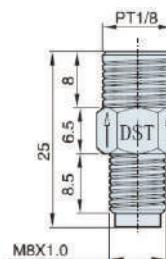

3. Suitable for periodic or continuous lubrication system.

过滤器	型号规格 specifications	过滤精度(μ)	流量Flow (L/min)	最大工作压力 (Mpa)
	VT-16	10	1.6	3.5
	VT-25	25	1.6	3.5
	VT-125	125	1.6	3.5

限流杆单向阀 Restrictor bar check valve

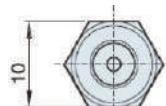

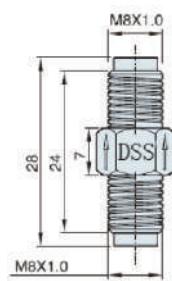

DST

	型号规格 specifications	标记 Marks	流量 Flow (CC/min)	连接方式 (connectingmode)
D S T	DST-0	DST0	1.8	进油口方向与(套管EB04)和(螺帽EN04)连接。出油口端与设备润滑点连接。(常用于支路末端) The oil inlet is connected to sleeve pipe EB04 and screw cap EN04. The oil outlet is connected to equipment lubricating point (usually used at the end of the branch).
	DST-1	DST1	3.8	
	DST-2	DST2	6	
	DST-3	DST3	12

DPB

	型号规格 specifications	标记 Marks	流量 Flow (CC/min)	连接方式 (connectingmode)
D P B	DPB-0	DST0	1.8	进油口方向与(VAB型)分油块连接。出油口方向与(套管EB04)和(螺帽EN04)连接。 (常用于支路前端) The oil inlet is connected to oil distribution block (model VAB). The oil outlet is connected to screw cap EN04 with the sleeve pipe (sleeve pipe EN04).
	DPB-1	DST1	3.8	
	DPB-2	DST2	6	
	DPB-3	DST3	12	
	DPB-4	DST4	18	
	DPB-5	DST5	22	

性能和特点 Performance & Characteristics

DST/DSS/DPB型抵抗式计量件又简称为比例式接头管式结构，内设有限流杆和单向阀启动压力：0.2MPa

通过节流原理控制流量，按流通能力（流量定数）对流量进行比例匹配。同型号计量件再润滑系统中相互间距离的远、近、高、低、卧装或立装均在实际衬使用中其出油量基本相等。使用寿命长，比例接头单相伐其橡胶密封件外部衬压铜套（除密封面外）防止橡胶密封件膨胀和老化。动作灵敏，排油畅通；比例接头单相伐采用锥形弹簧，确保计量件动作灵敏与排油畅通，并防止排出的油逆流。流量比：统一型号的流量在实际使用过程中会由环境温度的变化和有的黏度不同而发生变化。

1.DST/DSS/DPB resistant measurement device is called proportional joint.

2.Pipe structure: built-in flow limit bar and one-way valve.

3.Opening pressure: 0.2MPa

4.Flow is controlled by the principle of throttling, and distributed according to flowing capacity (flow constant). Meanwhile, the measurement device in the lubricating system with near, distant, high, low, horizontal or vertical installation have identical outlet flow. With long service life, the rubber sealing parts of the proportional one-way joint is coated with copper sleeve (except sealing face) to prevent expansion and aging of rubber sealing parts.

5.Sensitive action and smooth oil drain: taper spring is used for one-way valve with proportional joint to ensure that action of the measurement device is sensitive and smooth to prevent reverse flow of oil.

6.Flow ratio: flow of the same model shall be changed with change of environmental temperature and oil viscosity in use.

ESGD	M7X0.75	Φ11.8	Φ11.7	28	4	8	12	钢Steel

高压管接头外套High pressure adapter jacket

高压管弯涨芯The high pressure pipe bends the rising core

规格型号(外套) Model(Outer Casing)	D1	D2	D3	L1	L2	L3	SW	材料 Material
ESGL	M7X0.75	Φ11.8	Φ11.7	28	4	8	12	钢Steel

VWO 气动黄油加油机 Pneumatic butter oiler

1、本设备使用安全气压范围: 0.6~0.8MPa。
 2、严禁使用可燃性气体作为动力，否则后果自负。
 3、按季节使用锂基脂，冬季: 0#~1#，夏季: 2#~3# (请掺少量机油调均后使用)
 4、请勿长时间空载往复工作，以免部件磨损。
 5、严禁对人畜喷射。
 6、停止工作时，请关闭气源并开枪泄去管内压力。
 7、工作72小时必须卸下调压阀门，于配气体内部加机油润滑，避免干摩擦而引起漏气、死机。
 8、注意定期保养，清洁油管。

1. The safe air pressure range of the equipment is 0.6~ 0.8mpa.2. It is strictly prohibited to use combustible gas as power, otherwise the consequences shall be borne by the owner.3. Use lithium base fat according to season, winter: 0#~1#, summer: 2#~3# (please mix a little oil and adjust the use after all)4, do not long time no load reciprocating work, so as to avoid component wear.5. It is strictly prohibited to spray humans and animals.6. When the work stops, please close the air source and discharge the pressure in the pipe.7. The pressure regulating valve must be removed and lubricated with oil in the gas distribution to avoid leakage and crash caused by dry friction.8. Pay attention to regular maintenance and clean the oil pipes.

型号规格 specifications	储油量Oil reserves	输入空气压力 (MPa) Input air pressure
VWO-16	16L	0.4~0.9
VWO-30	30L	0.4~0.9
VWO-40	40L	0.4~0.9

VWG 手动加油枪 Manual oiling sprayer

适用于像各类稀油、油脂润滑油泵添加油剂
 将加油泵插入标准15KG桶装商品润滑脂桶内即可操作。
 携带方便、操作简单、用途广泛
 配备1.5米软管与快插接头
 使用介质、环境温度：000#-2#锂基脂、N22-N320机械油-20~80° C

. Applicable for various thin oil, oil grease lubricating pump additive oil pump.
 . The refilling oil pump is inserted into standard 15Kg bucket commercial lubricating grease then can be operated.
 . Portable, simple operating and extensive application,
 . Configured with 1.5m flexible pipe and quick plug.
 . Media and environmental temperature: 000 -2 lithium base grease and N22-N320 machine, machine oil -20~+80C

型号规格 specifications	VWG-10Z	VWG-10ZA
公称流量Nominal flow mL/CY	10	10
公称压力Nominal pressure MPa	2.0	4.0
配管型式Piping model	橡胶软管配快速插接头 Rubber flexible pipe quick plug	尼龙管配快速插接头 Nylon piping quick plug

油量计算 Oil quantity calculation

1. 集中润滑装置的选择方法 系统的选择依照以下顺序进行

● 需油量的计算方法

使用场合	计算公式	例题 $K = 1$ 时
滚动轴承 	(滚动轴承、滚柱轴承、滚针轴承) 油量 $Q(\text{m l/h}) = 0.04 \times \text{直径} \times \text{列数} \times K$	假设有一滚珠轴承，轴承直径为80mm，求每小时常所需之油量。 $Q=0.04\times8\times1=0.32(\text{c.c/hr})$
滑动轴承 	油量 $Q(\text{m l/h}) = 0.023 \times \text{转轴直径} \times \text{轴承长度} \times K$	假设有一平滑雪轴承，垂直放置，滑块长100mm宽40mm，求每小时所需之油量。 $Q=0.023\times8\times10=1.84(\text{c.c/hr})$
平面导轨 	a. 油量 $Q(\text{m l/h}) = 0.0017 \times (\text{移动件长度} + \text{行程}) \times \text{宽度} \times K$ (水平方向) b. $Q(\text{m l/h}) = 0.006 \times (\text{移动件长度} + \text{行程}) \times \text{宽度} \times K$ (垂直方向)	假设有一滑动轴承，轴直径为80mm，接触长度为100mm，求每小时所需之油量。 $Q=0.006\times10\times4=0.24(\text{c.c/hr})$
圆柱导轨 	a. 油量 $Q(\text{m l/h}) = 0.023 \times \text{直径} \times (\text{移动件长度} + \text{行程}) \times K$ (水平方向) b. 油量 $Q(\text{m l/h}) = 0.07 \times \text{直径} \times (\text{移动件长度} + \text{行程}) \times K$ (垂直方向)	假设有一圆筒滚动体，直径为80mm长为100mm求每小时常所需之油量。 $Q=0.023\times8\times10=1.84(\text{c.c/hr})$
滚珠轴承轨道 	油量 $Q(\text{m l/h}) = 0.012 \times \text{移动件行程} \times \text{列数} \times K$	假设有一线性滑轨，滑块长80mm滑块数为2，求每小时所需之油量。 $Q=0.012\times8\times2=0.19(\text{c.c/hr})$
凸轮 	油量 $Q(\text{m l/h}) = 0.013 \times \text{接触圆周} \times \text{宽度} \times K$	假设有一凸轮机构，凸轮圆周长为200mm宽20mm，求每小时所需之油量。 $Q=0.013\times20\times2=0.52(\text{c.c/hr})$
齿轮 	油量 $Q(\text{m l/h}) = 0.046 \times \text{节园直径} \times \text{齿度} \times K$	假设有一个链条总长300mm，链宽8mm，求每小时常所需之油量。 $Q=0.046\times8\times2=0.74(\text{c.c/hr})$
链条 	油量 $Q(\text{m l/h}) = 0.008 \times \text{长度} \times \text{齿宽} \times K$	假设有一正齿轮，节圆直径为80mm齿宽20mm，求每小时常所需之油量。 $Q=0.008\times30\times0.8=0.19(\text{c.c/hr})$
式中长度、直径单位均为 cm，系数K为倍数值，与运动速度有关，可查图。		

油量计算 Oil quantity calculation

2.部分机械使用润滑情况表

机械名	润滑处所		滴 油		备注
			ISO粘度等级	备注	
车床	主轴	高速 一般	10 22,32	特级锭子油R12 特级锭子油R12 特级循环机油R32	注一
	车床尾座		32,46,68	特级循环机油R32-R68	注一
	溜板		32,46,68	特级循环机油R32-R68	注一
	护床		32,46,68	特级循环机油R32-R68	注一
	进给变速装置		32,46,68	特级循环机油R32-R68	注一

常见故障及排除方法

Common faults and troubleshooting methods

电动润滑油泵常见故障及排除方法

Common faults and troubleshooting methods of Electric Lubricating Oil pump

序号 Serial number	现象 The phenomenon of	原因 Why	排除方法 Elimination method
1	电机不转 Motor does not turn	使用电压不对 Wrong voltage	使用正确电压电源 Use the correct voltage power supply
		接线错误 Wrong Wiring	按正确的电气接线图接线 Connect according to the correct electrical wiring diagram
		吸入微细沙粒困死齿轮 Suck in tiny grains of sand and trap the gear	拆除底部齿轮泵清洗 (此项必须由专业人士操作) Remove bottom gear pump cleaning (this must be operated by a professional)
2	压力不足 Insufficient pressure.	压力表已损坏 The pressure gauge is damaged	更换压力表 Replace the pressure gauge
		主油管泄漏 Main line leakage	检查注油管，排除泄漏现象 Check the oil injection pipe to eliminate leakage
		油泵加压时有支油管严重出油 When the oil pump is pressurized, the oil comes out seriously	检查更新出油支管的分配器内换向阀 Check and update the reversing valve in the distributor of the oil outlet branch
		油泵溢流阀密封不好 The oil pump overflow valve does not seal well	拆下清洗 Remove and clean
		吸油口处堵塞 The oil suction is blockage	清洗油箱，吸油口处滤网 Clean the fuel tank and filter at the suction port
3	不出油 don't give oil.	泵内空气未排清 The air in the pump is not cleared	多几次泵油，必要时松开油口再泵油 Pump the oil a few more times, loosen the port and pump the oil if necessary
		电机不转 Motor does not turn	见序号1项 See item 1 of serial number
4	出油量少 the oil quantity is little	吸油口处堵塞 The oil suction port is blocked	清洗吸油口处滤网 Clean the filter at the suction port
		溢流阀密封不好 The overflow valve is not well sealed	取下溢流阀清洗 Remove relief valve cleaning
5	压力开关失灵 Pressure switch malfunction	系统压力不足 Undersystem pressure	检查管路系统压力必须大于1.0MPa Check pipeline system pressure must be greater than 1.0MPa
		接线错误 Wrong wiring	按电气接线图正确接线 Correct wiring according to electrical wiring diagram
6	液位开关失灵 the levelswitch failed	浮球与油箱相碰 The float hit the oil tank.	设法将液位开关位置纠正 Try to correct the position of the liquid level switch
7	油泵电机不停 Oil pump motor	系统PLC控制电源线通电时间过长或电源线没有经过系统PLC控制 System plc control power supply the is too long or the power cord is not passed system plc control	正确设置 Correct setup
		数码管电脑给油时间设置太长 Digital tube computer set too long to oil	正确设置 Correct setup
